EXPT NO:9 INPUT VALIDATE DATA (ERROR &CORRECTION)

ROLL NO: 240701499

Name: shivam jaiswal

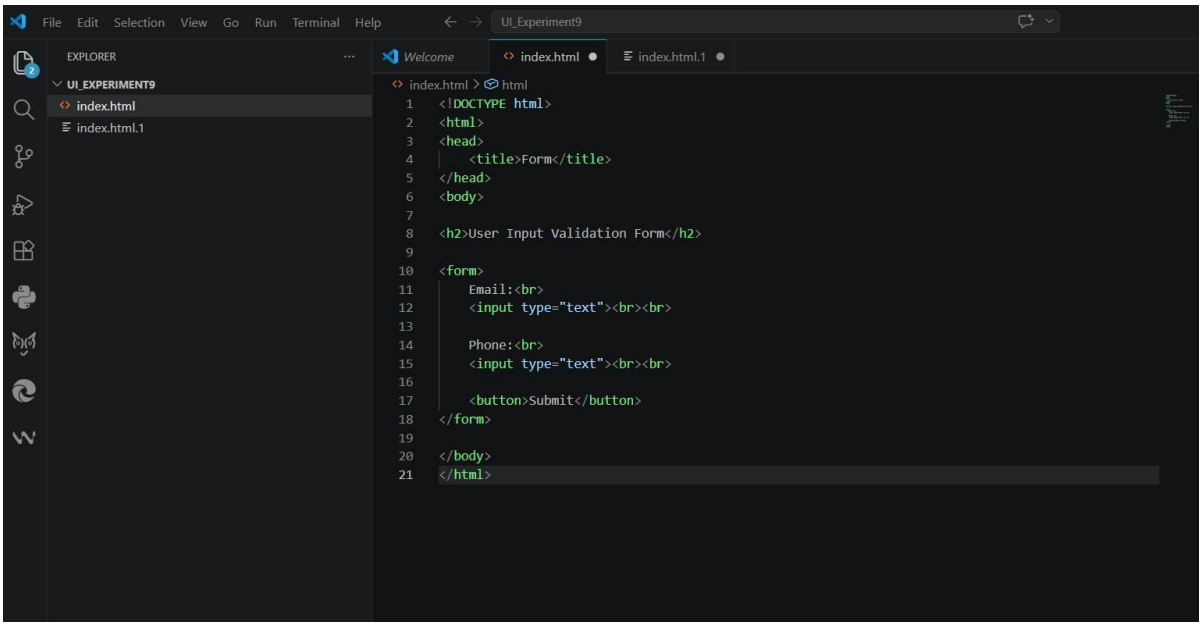
Department: cse

aim:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using html/css and
Javascript with validator.js.

Implementation done using: vs -code

Step 1: using html: code



Step 1: setting up the html form

1. Open visual studio code and create a new file named index.html.
2. Start the document with the <!doctype html> declaration to define it as an html5 document.
3. Add the <html> tag to begin the html structure.
4. Inside the <head> section, give the page a title using the <title> tag.
5. Inside the <body> section, add a heading using the <h2> tag as **user input validation form**.
6. Create a form using the <form> tag to collect user input.
7. Add the label **email** inside the form.

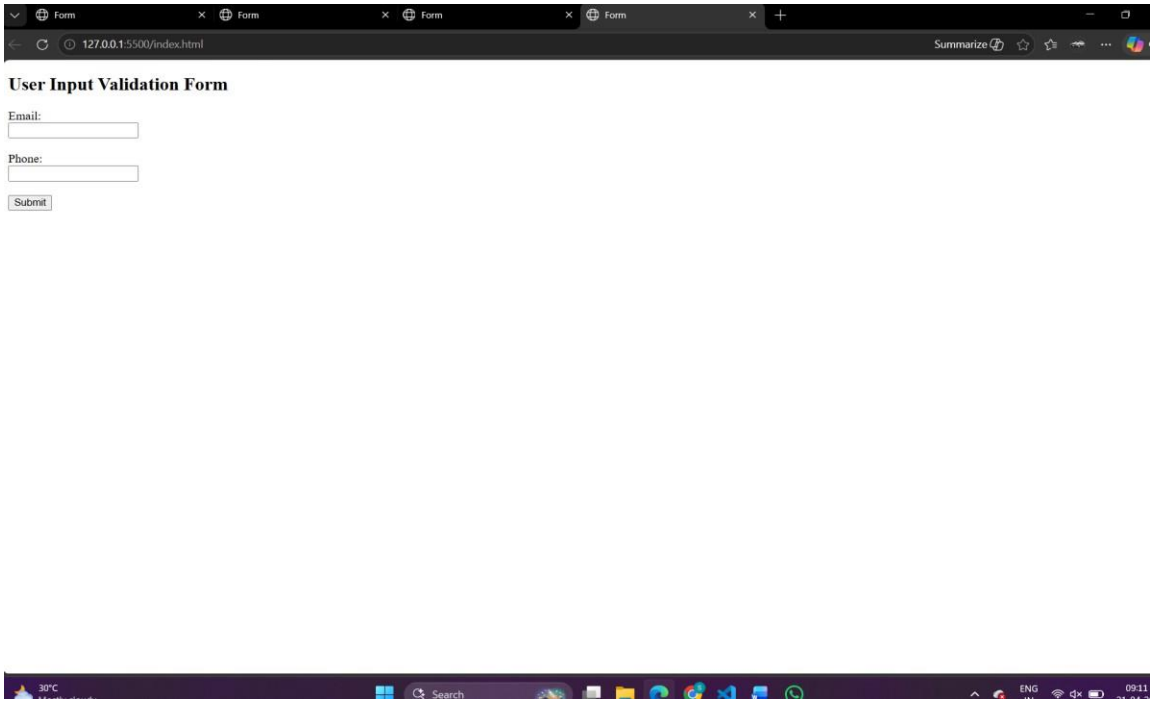
(now when the terminal is opened with an live server its the Browser loads the html file instantly without manual refresh. Any changes made in the code will automatically reflect in the Browser. This helps in real-time preview and faster development.)

Live server html paging:



Description for html:

The html form is displayed in the browser using live server, showing the heading "user input validation form" at the top. It contains two input fields for entering the email and phone number, along with a submit button below them. The layout appears simple because only the basic html structure is used without any css styling. The input Fields accept user data, but no validation or error checking is Performed at this stage. This output confirms that the form structure has been created correctly and is functioning as expected.

Code using css: code

```html
<!DOCTYPE html>
<html>
<head>
    <title>Validation Form</title>
    <style>
        body {
            font-family: Arial, sans-serif;
            background-color: #f2f2f2;
            display: flex;
            justify-content: center;
            margin-top: 100px;
        }

        .box {
            background: white;
            padding: 25px;
            border-radius: 10px;
            width: 350px;
            box-shadow: 0 0 10px rgba(0,0,0,0.2);
        }

        h2 {
            text-align: center;
        }

        label {
            font-weight: bold;
        }

        input {
            width: 100%;
            padding: 10px;
            margin-top: 5px;
            margin-bottom: 15px;
            border: 1px solid #ccc;
            border-radius: 5px;
        }

        button {
            width: 100%;
            padding: 10px;
            background-color: blue;
```

```html
<html>
<head>
    <style>
        input {
            width: 100%;
            padding: 10px;
            margin-top: 5px;
            margin-bottom: 15px;
            border: 1px solid #ccc;
            border-radius: 5px;
        }

        button {
            width: 100%;
            padding: 10px;
            background-color: blue;
            color: white;
            border: none;
            border-radius: 5px;
        }
    </style>
</head>
<body>

<div class="box">
    <h2>User Input Validation Form</h2>

    <form>
        <label>Email:</label><br>
        <input type="text" placeholder="Enter your email"><br>

        <label>Phone:</label><br>
        <input type="text" placeholder="Enter your phone number"><br>

        <button type="submit">Submit</button>
    </form>
</div>

</body>
</html>
```

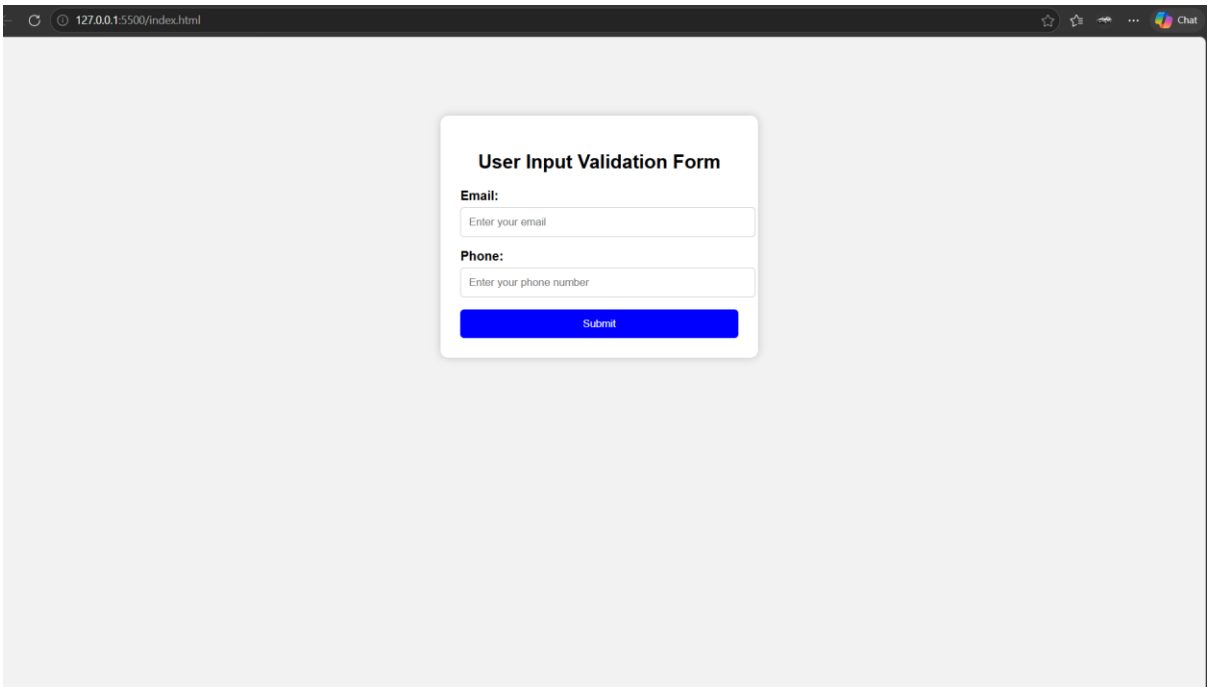
Css live server page :



Descrption: (css)

The html form is enhanced using css to improve its visual appearance and layout. The body is styled with a light background color and
Centered alignment using flex properties. The form is placed inside a container box with padding, rounded corners, and a shadow effect to make it visually appealing. The heading is centered for better
Presentation. Labels are made bold to clearly indicate input fields. The input boxes are styled with full width, padding, margins, and rounded borders for better usability. The submit button is designed with a blue background, white text, and rounded edges to make it
Stand out. Overall, this step improves the user interface, making the form cleaner and more user-friendly compared to the basic html form.

code implementation using javascript: code

```html
<!DOCTYPE html>
<html>
<head>
    <title>Validation Form</title>
    <style>
        body {
            font-family: Arial, sans-serif;
            background-color: #f2f2f2;
            display: flex;
            justify-content: center;
            margin-top: 100px;
        }

        .box {
            background: white;
            padding: 25px;
            border-radius: 10px;
            width: 350px;
            box-shadow: 0 0 10px rgba(0,0,0,0.2);
        }

        h2 {
            text-align: center;
        }

        label {
            font-weight: bold;
        }

        input {
            width: 100%;
            padding: 10px;
            margin-top: 5px;
            margin-bottom: 5px;
            border: 1px solid #ccc;
            border-radius: 5px;
        }

        .error {
            color: red;
            font-size: 14px;
            margin-bottom: 10px;
```

```html
<html>
<head>
    <style>
        .error {
        }

        .success {
            color: green;
            font-size: 15px;
            text-align: center;
            margin-top: 10px;
        }

        button {
            width: 100%;
            padding: 10px;
            background-color: blue;
            color: white;
            border: none;
            border-radius: 5px;
            margin-top: 10px;
        }
    </style>
</head>
<body>

<div class="box">
    <h2>User Input Validation Form</h2>

    <form id="myForm">
        <label>Email:</label><br>
        <input type="text" id="email" placeholder="Enter your email">
        <div id="emailError" class="error"></div>

        <label>Phone:</label><br>
        <input type="text" id="phone" placeholder="Enter your phone number">
        <div id="phoneError" class="error"></div>

        <button type="submit">Submit</button>
        <div id="successMessage" class="success"></div>
    </form>
</div>
```

EXPT NO:9 INPUT VALIDATE DATA (ERROR &CORRECTION)

```html
<html>
<body>
<div class="box">
    </form>
</div>

<script src="https://cdnjs.cloudflare.com/ajax/libs/validator/13.9.0/validator.min.js"></script>

<script>
document.getElementById("myForm").addEventListener("submit", function(e) {
    e.preventDefault();

    let email = document.getElementById("email").value.trim();
    let phone = document.getElementById("phone").value.trim();

    let emailError = document.getElementById("emailError");
    let phoneError = document.getElementById("phoneError");
    let successMessage = document.getElementById("successMessage");

    emailError.textContent = "";
    phoneError.textContent = "";
    successMessage.textContent = "";

    let valid = true;

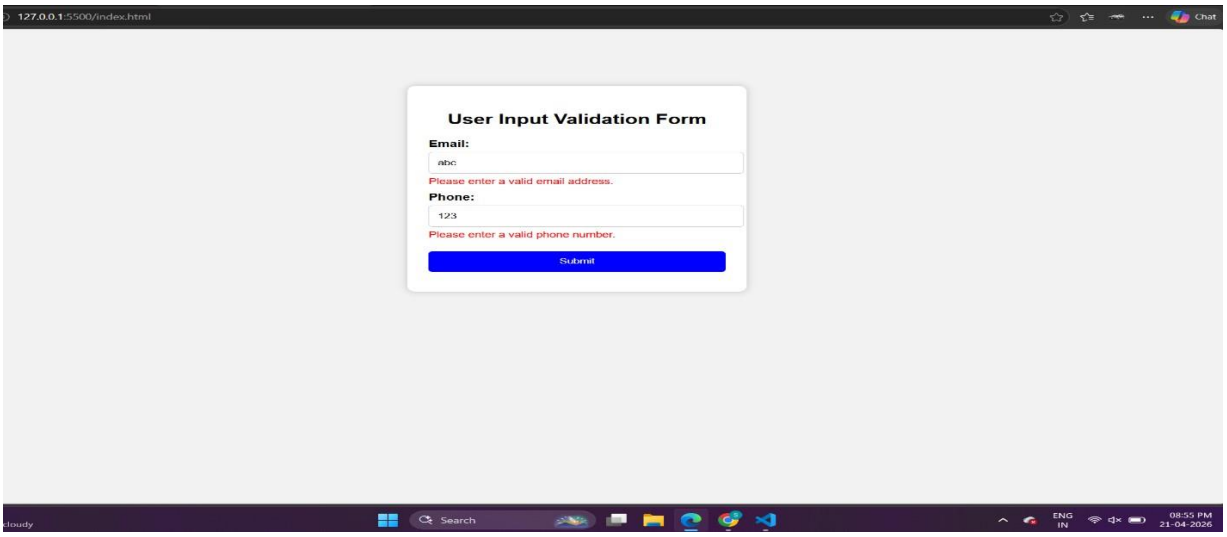
    if (!validator.isEmail(email)) {
        emailError.textContent = "Please enter a valid email address.";
        valid = false;
    }

    if (!validator.isMobilePhone(phone, "en-IN")) {
        phoneError.textContent = "Please enter a valid phone number.";
        valid = false;
    }

    if (valid) {
        successMessage.textContent = "Form submitted successfully!";
    }
});
</script>

</body>
```

Validation (error screen):

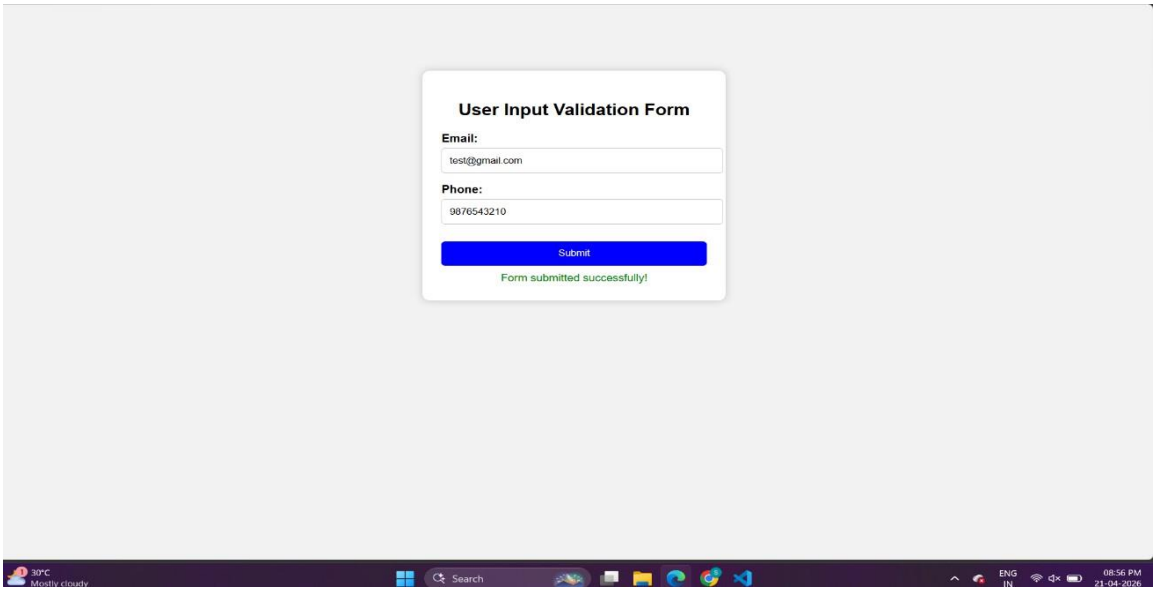


The form displays error messages when invalid input is entered by the user. In this case, the email field contains an incorrect format, and

The phone number is not valid, so validation fails. Javascript along with validator.js checks the input values when the submit button is clicked. If the entered data does not meet the required format, appropriate error messages are shown below each input field.

EXPT NO:9 INPUT VALIDATE DATA (ERROR &CORRECTION)
ROLL NO: 240701499

Validation (validate screen):



The form performs validation using javascript and validator.js to ensure correct user input. When valid data is entered in both the
Email and phone fields, the form accepts the input. The email is checked for proper format, and the phone number is verified based on valid criteria. Since both inputs meet the required conditions, no error messages are displayed. Instead, a success message is shown below
The submit button. The message “form submitted successfully!” Appears in green color to indicate successful validation. This
Confirms that the form is working correctly and handling valid inputs as expected.

Conclusion:

The input form was successfully designed using html, css, and
Javascript with validator.js. The form was able to accept user input and validate the email and phone number fields effectively. Error
Messages were displayed for invalid inputs, and a success message was shown for valid data was successfully implemented .
