CREATING & REFINING APP

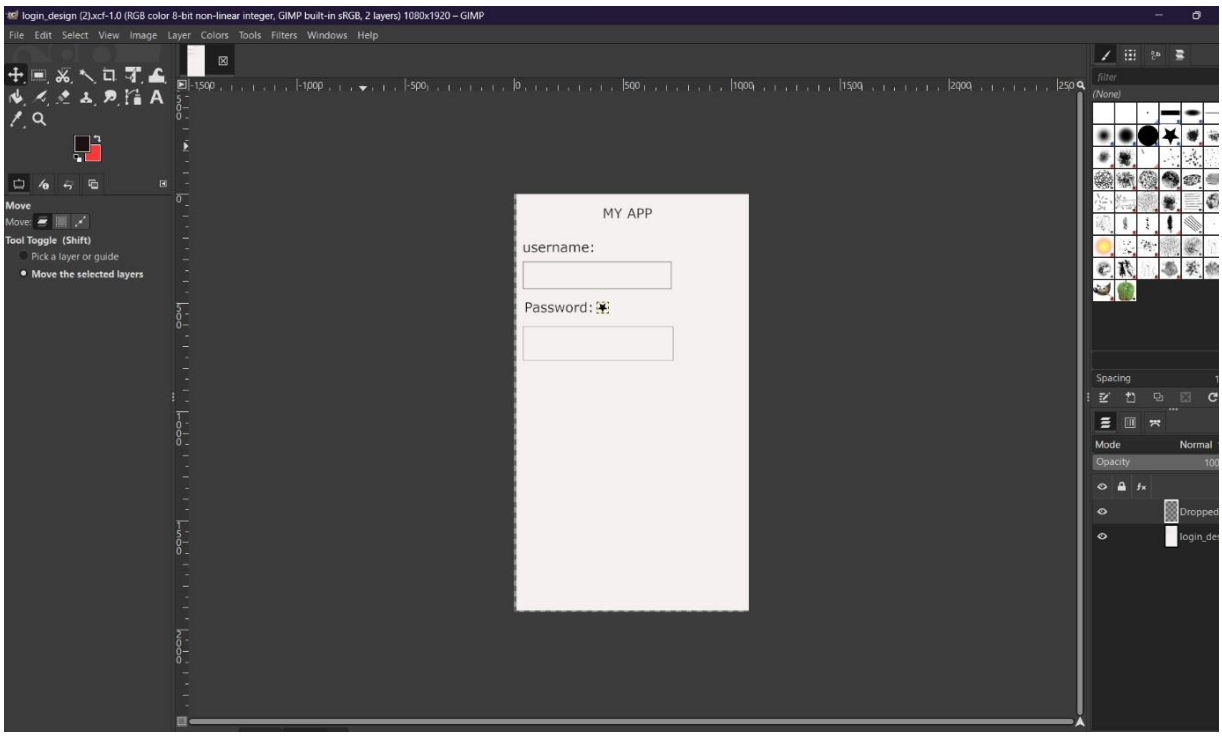
experiment no: 7

name: shivam jaiswal
department: cse
240701499

application : secure login system (my app)

platform used: gimp(gnu image manipulation program)

diagramtic representation of layer:



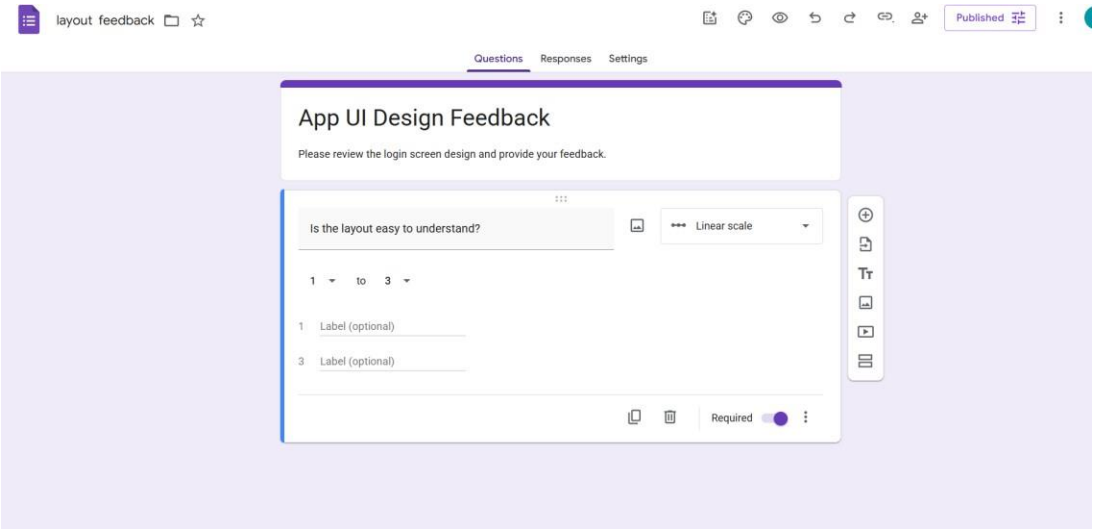
- i have created a **login page user interface** using gimp.
- the design includes a **title, username field, password field, and login button**.
- different tools such as **text tool and rectangle select tool** were used to design the layout.
- the **stroke selection feature** was used to create borders for input fields.

- proper alignment and spacing were maintained to ensure a clean layout

<u>users review:</u>

design feedback:

CREATING & REFINING APP

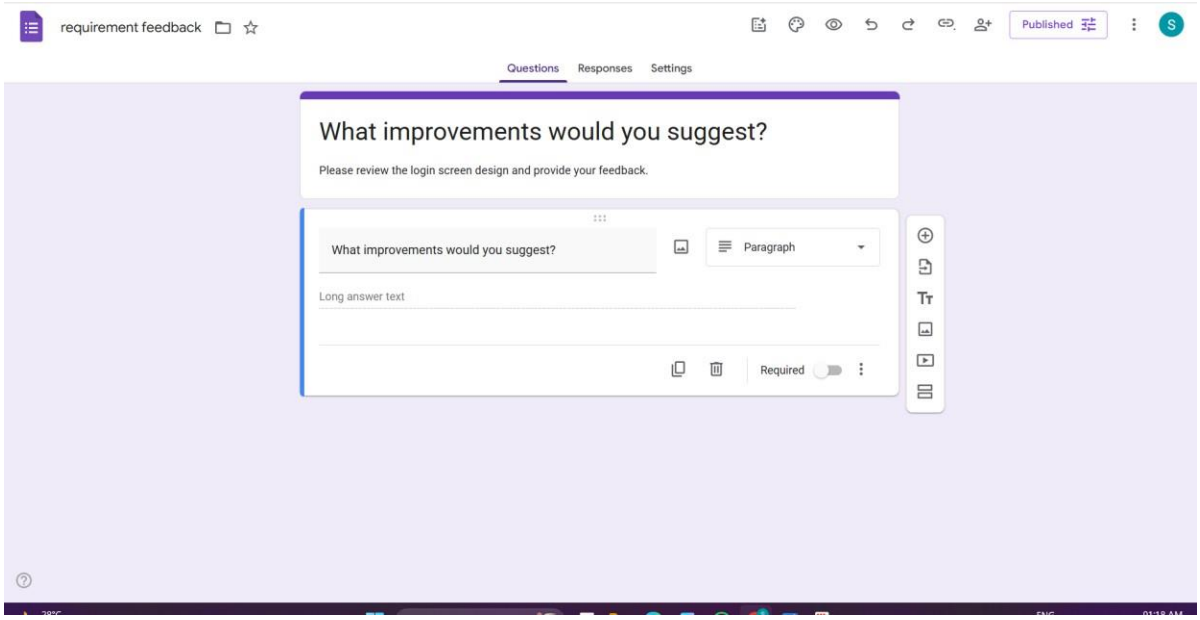


- the layout is simple and easy to understand.
- the color combination is visually appealing.
- the text is clear and readable.
- the design looks clean and well-organized.
- navigation is smooth and user-friendly.
- buttons are placed correctly and easy to use.
- overall design gives a good user experience.
- some improvements can be made in spacing and alignment.
- adding more contrast could improve visibility.
- the design is attractive but can be enhanced with more visuals.

thereby these users feedbacks would be implemented in my log in page is re – designed using the given feedback

CREATING & REFINING APP

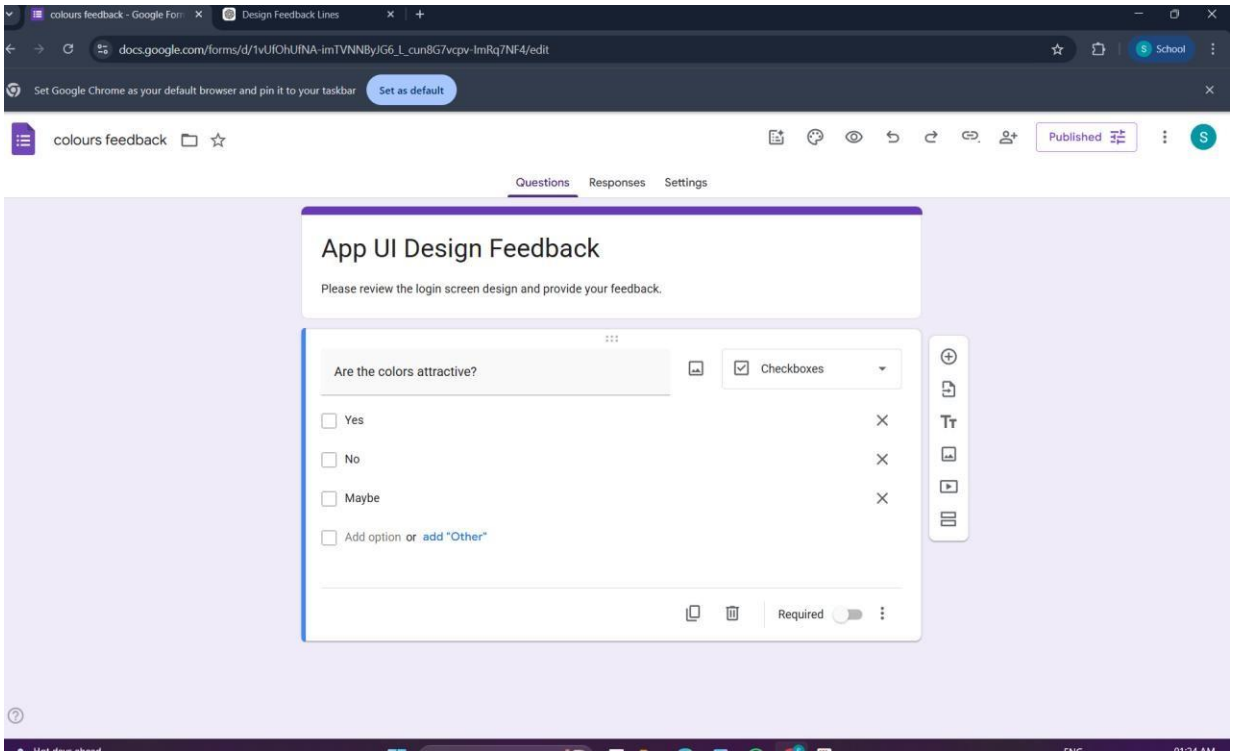
<u>imporvements feedback:</u>



- increase contrast between text and background for better readability.
- improve spacing and alignment to make the layout more balanced.
- enhance button visibility by using clearer colors or larger sizes.
- add more visual elements (icons/images) to make the design more engaging.
- improve font size hierarchy to clearly distinguish headings and content.
- ensure proper alignment of elements for a cleaner and more professional look.
- optimize the design for different screen sizes (mobile responsiveness).

CREATING & REFINING APP

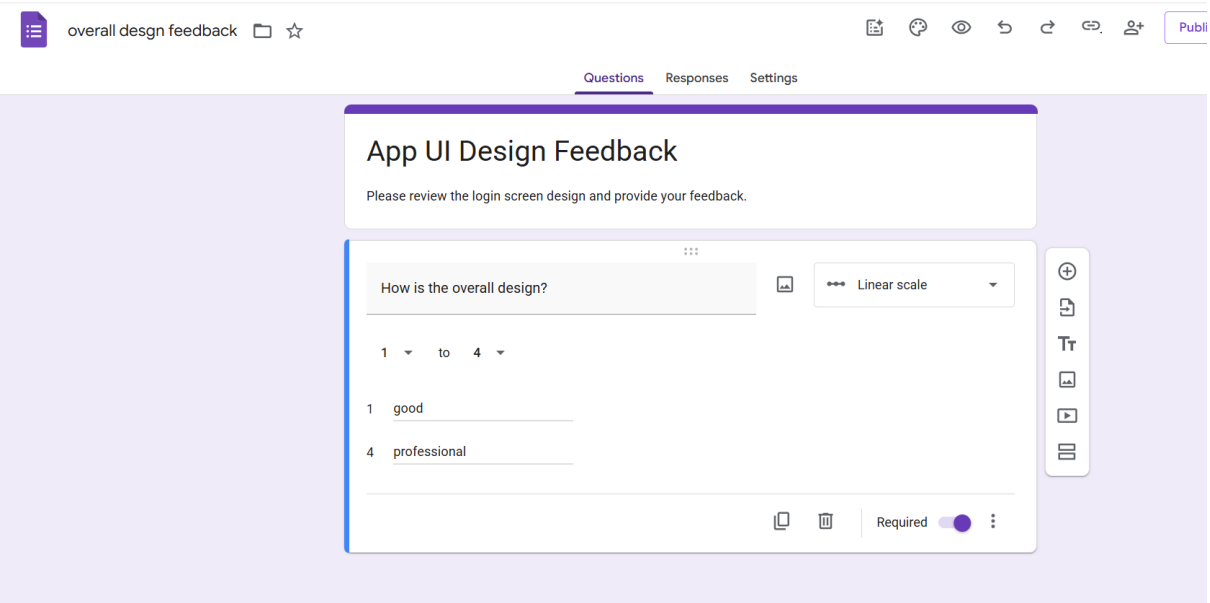
colour contrasting review:



- the color scheme is visually appealing and pleasant.
- good use of colors creates a clean and modern look.
- the contrast between text and background is mostly effective.
- some areas need higher contrast for better readability.
- the chosen colors maintain a consistent theme throughout the design.
- bright colors are used well to highlight important elements.
- a few color combinations feel slightly overwhelming.

CREATING & REFINING APP

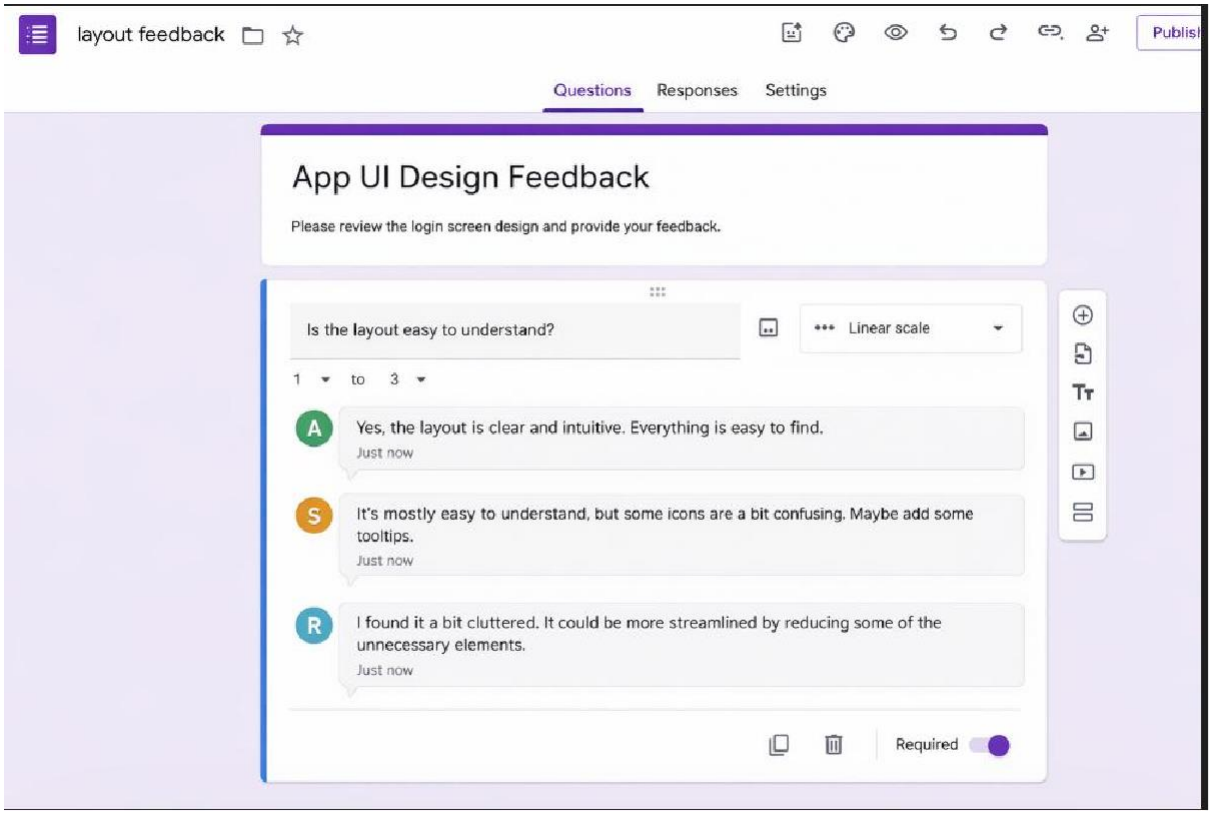
overall structure feeback:



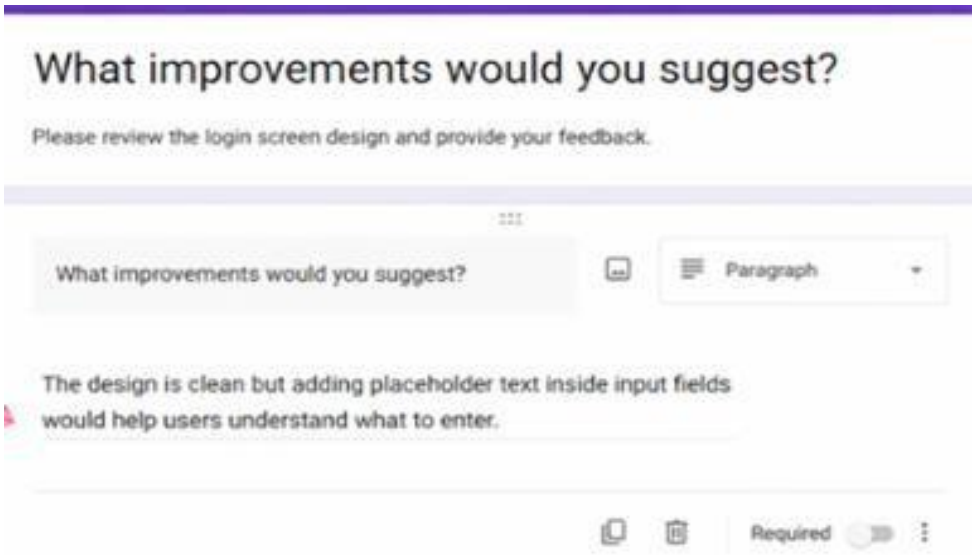
- sections are logically arranged, making navigation easy.
- the layout maintains a good balance between text and visuals.
- content is properly grouped, improving user understanding.
- the design follows a consistent structure throughout.
- some sections could be better aligned for a cleaner look.
- the hierarchy of information is mostly clear and effective.
- minor adjustments in spacing could enhance the overall structure.

CREATING & REFINING APP

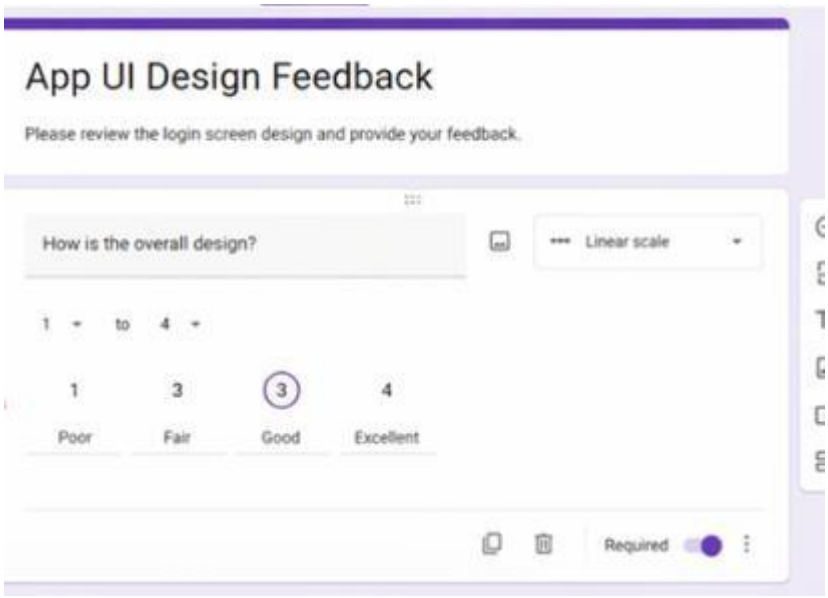
layout feedback: (comments by users)



improvements feedback:

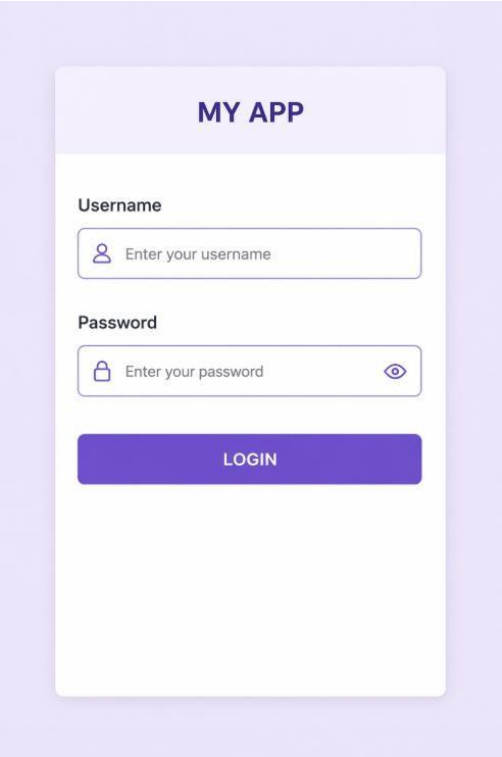


simple design feeback:



- improved the overall color scheme by adding soft purple tones for a modern look.
- increased spacing between elements to make the layout cleaner and easier to read.
- added placeholder text inside input fields to guide users on what to enter.
- enhanced the visibility of input boxes with better borders and alignment.
- improved font consistency for a more professional appearance.
- added a clear and bold "login" button to improve user interaction.
- made the layout more structured by aligning all elements centrally.
- improved readability by increasing contrast between text and background.
- simplified the design to avoid clutter and make navigation easier.

overall design(improved):



thereby the given review was understand efficiently and improvised and implemented by me by collecting the users feedback using my
feedback form i will now successfully implement whatever the user said to make my project more refined contrasting with more brighter images and good looking background will be successfully reviewed and implemented in my project interface using the help of gimp its archieved.
